

C. ST. CHARLES TO SANDWICH B.

Compiled chiefly from the Survey of Michael Lane 1771
with corrections from the Observations and Surveys of
Capt. H. W. Bayly 1855, Commr. W. Chinn, R.N. 1867
and other Officers of H.M. Navy
All heights are expressed in feet above high water ordinary Springs
in mud, s. rock, s. sand, s. shells, s. stones.
Magnetic Variation in 1871, nearly stationary
SOUNDINGS IN FATHOMS

Caution.
The coast of Labrador is very imperfectly known. Many of the soundings made and islands are only approximately placed on this chart, and it is believed that many more exist than are shown. The prevalence of fog the whole of the summer season, and the danger of navigation, render extreme caution necessary when near the shore.
